

1. First thread the screws through each footplate.

2. Next, Screw the first pole onto the footplate, and the second pole into the top of the other.

3. Slide the clips onto the ridges, 2 clips on each side.

4. Then attach the poles to the clips, ensuring the top of the board is in line with the top of the pole. Then attach the lower board underneath. Either board can be attached first.

5. When attaching the adjacent boards to the pole, clip these on at a slight angle for added stability.

Once clipped to the pole, push the bottom board up until it meets the top board, for a neat finish.

6. There we have it, your fully assembled display!
